

## DailyOutlook

***Northern California Daily Outlook***

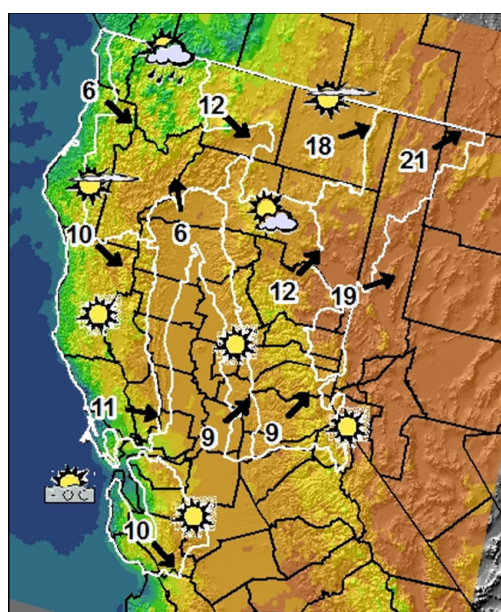

Issued: Thursday, September 05, 2013

***Weather Synopsis:***

\*\*\* Gusty SW winds Cascade/Sierras & Eastside Today \*\*\*

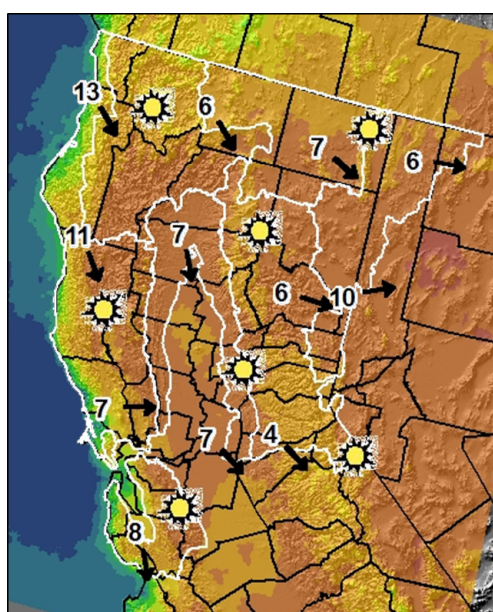

\*\*\* Prolonged period of NE/Offshore Winds Fri-Tue \*\*\*

Strong low pressure will track across Oregon today, where it will produce showers and wet thunderstorms. The far northern portions of CA along the OR border will likely see a little bit of that today, but just south of there the main effects of this low will be moderate to strong SW winds of 20-40 mph. Humidity will not be critically low, and fuels are not critically dry, so no "High Risk" will be issued. However, a major pattern shift to NE/offshore flow takes place late tonight behind this low. By Friday morning NE winds of 7-15 mph along with much lower humidities will be present in many areas, especially west of the Sierra/Cascade crest. This includes a general lowering of overnight RH recovery too. The pattern will continue into the weekend and early next week along with a steady warming and drying trend. Basil

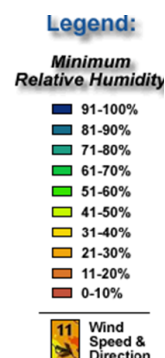

***Day 1***  
***Min RH & Afternoon Winds***

Valid For: Today

***Day 2***  
***Min RH & Afternoon Winds***

Valid For: Friday

***3 to 7 Outlook:***

Saturday Through Wednesday

**Coast Range Westward:**

Warming, drying with locally gusty NNE to E winds through midday Tuesday, otherwise no significant fire weather expected.

**Sacramento Valley and surrounding foothills:**

Warming, drying with gusty N to ENE winds through midday Tuesday, mainly in the northern areas and along the eastern foothills.

**Cascades and Sierra Nevada from 3500' to Crest, NE California and NW Nevada:**

Drying and warming with light NE to E winds. Otherwise no significant fire weather expected.
